

LIAM HJALMARSSON

Junior Full Stack Developer

Summary

With a background in media production and processdesign from Malmö University, I have broad competence across several areas, predominately in development and user experience. My main focus is on frontend development where I have created applications using JavaScript and frameworks such as React. My experience and knowledge in both design and development gives me a unique ability to create user-friendly interfaces.

Work Experience

2023
6 months

Sjöbergska huset

Internship

- Managing the development of a donation site for an organization using Webflow.
- Be part of leading and running the project from the first business meeting to handover.
- Played an active role in developing various parts of the project to ensure continuous and effective reconciliations with clients. This included: wireframes, graphic profiles, prototype, functionality.
- Practice and improve time estimation skills.
- Revising and updating the documentation for the company manual, with a focus on Drupal.
- Participated in another fictional project in entertainment focusing on meetings, sales processes, idea generation and research.
